Tarunpreet Singh

✓ Senior Backend Engineer (Java, Spring Boot) | Microservices &
REST APIs | Led Delivery Across Teams
Waterloo, Ontario, Canada

Summary

I'm a backend engineer with over 4 years of experience building robust microservices using Java and Spring Boot. I specialize in designing REST APIs and modular backend systems that are scalable and easy to maintain.

I've consistently taken initiative to lead projects — even in teams where senior developers were present — by owning deliverables, resolving blockers, and helping teammates reach their full potential. I pride myself on delivering high-quality code on time and being the go-to person for reliable backend solutions.

I'm currently learning cloud technologies like AWS to broaden my architectural capabilities and align with modern backend infrastructure practices.

I'm actively seeking a Senior Backend Engineer role where I can combine my technical depth, delivery ownership, and team-first mindset to drive product and engineering success.

Feel free to connect if you're hiring or want to discuss backend development, career growth, or system design!

Experience

Manulife

3 years 9 months

Software Engineer

February 2023 - Present (2 years 7 months)

Waterloo, Ontario, Canada

✓ Led the Interac e-Transfer Limits initiative, improving user clarity around transaction limits and reducing customer support calls significantly.

- ✓ Delivered a critical backend feature end-to-end within a month, trusted directly by a senior developer to own and complete the task independently while mentoring teammates throughout.
- ✓ Spearheaded the Credit Card Limit Increase automation project, guiding two senior developers while managing the delivery of business logic and microservice integration.
- ✓ Frequently collaborate in pair programming sessions with junior and intermediate developers, offering mentorship through feedback, collaborative debugging, and documentation sharing.
- ✓ Wrote and maintained internal technical documentation for contract flows and backend integrations, helping new team members ramp up quickly.
- ✓ Identified a production issue in a custom authorization library owned by another team, traced the root cause in real-time, and unblocked users by proposing the fix, demonstrating quick thinking under pressure.
- ✓ Known within the team for consistently delivering high-quality backend solutions on time, even under tight deadlines, while fostering a positive engineering culture.

Associate Mobile Software Engineer
 August 2022 - February 2023 (7 months)
 Waterloo, Ontario, Canada

- ✓ Prior to my promotion to software engineer, I helped the team with both Android and Spring boot features.
- ✓ Developed core card features, like card lock/unlock/activation. This reduced the calls to customer support and gave clients more power. Eventually helped to get great app ratings.
- ✓ Mentored peers on contract to get them onboard quickly and helped them to bring out their best

Associate Full Stack Developer
 December 2021 - August 2022 (9 months)
 Waterloo, Ontario, Canada

- ✓ Hired as an associate full stack engineer, I took the ownership to migrate our Gradle based services to Maven. This increased productivity as most of the peers were seniors who had experience in Maven.

- ✓ Took over the core e-Transfer services, built on Kotlin and updated the projects to get rid of any security issues.
- ✓ Became SME of e-Transfer services, as I wanted to contribute right away after I joined.

Value Connect Inc.

Junior Software Developer

January 2021 - November 2021 (11 months)

Guelph, Ontario, Canada

- ✓ Successfully delivered the mobile application within tight deadline without having any prior knowledge of it
- ✓ Consistently recognized for debugging and front-end design abilities
- ✓ Helped team in reducing their workload by reviewing Pull Requests
- ✓ Fixed a bug in the application on release day

Education

Conestoga College

Post Graduation, Mobile solutions development · (2019 - 2020)

Zero To Mastery Academy

Computer Science · (2020 - 2020)

Guru Tegh Bahadur Institute Of Technology

Engineer's Degree, Computer Software Engineering · (2014 - 2018)
